Description

Version:

- End face turned flat.

Description:

The toolholder is securely pulled into the spindle by the spindle's clamping gripper using the pull stud. Pull studs come in different versions. They are an important link between the machine and tool. Stringent requirements apply for the accuracy, strength and reliability of pull studs.

Application:

- For tools with taper shanks see also **DIN 69871** and **JIS B 6339 (MAS-BT)**.
- In machining centres (machines with automatic tool changers).
- In NC machines (machines without automatic tool changers).

Note:

Sealed – with O-ring.

Look in the eShop – you will find the right clamping wrench and width for every job.

When installing the pull stud, cheque the correct tightening torque. No suitable chuck key available.
