Description

Version:

With longitudinal groove for clamping on face mill arbors (DIN 6357) and combination face mill adapters (DIN 6358).

Disc brushes with **extremely tightly packed abrasive bristles (right to the edge of the brush)** embedded in the plastic pad. The bristles support each other, giving a **highly stable shape**. Very long working life.

Nylon bristles with **ceramic grit content.** More aggressive abrasive effect.

Advantage:

- · Workpiece rework directly after the machining process.
- · Reproducible results due to constantly exposed grinding grit.
- · Good process reliability thanks to high shape stability and shape accuracy.
- · Quick and secure installation without further accessories.
- · Very low radial run-out.

Application:

On **CNC** machining centres and when used by robots, preferably wet grinding with cooling lubricant. Machining of flat components: precise **deburring**, **edge rounding**, **finish machining** after milling, **surface finishing** e.g. of sealing and mating faces.

Note:

Special versions available on request.
