Description

Version:

Bearing separator of high-quality tool steel.

Separator: The quick-release semicircular jaws are symmetrically tensioned by a screw. This causes the wedge-shaped jaws to insert themselves between bearings and shaft.

Extractor: Used in conjunction with the separator to extract bearings from their seating (for this the draw bolts are screwed into the threaded holes in the separation jaws).

Application:

For the separation of tightly wedged ball bearings, gears, etc., if the gap is too small for normal extraction arms.
